GL BAJAJ INSTITUTE OF TECHNOLOGY AND MANAGEMENT

Academic Year 2025–26

Project Title: Campus Clone – Unified College Ecosystem

Web Application Based

Project Overview

The project "Campus Clone (MPIA)" is a web-based initiative developed for the students of GL Bajaj Institute of Technology & Management, Greater Noida. The system aims to solve the fragmentation of campus communication by providing a centralized, verified platform (restricted to official @glbitm.ac.in domains) that consolidates departmental announcements, student forums, club activities, and academic task management. By leveraging real-time communication and an AI-driven assistant, the application seeks to eliminate the chaos of unofficial messaging groups, enhance student engagement, and streamline the college experience into a single, cohesive digital ecosystem.

Objectives

The core objectives of this project are to design and develop a secure web application that acts as a central hub for college students; to provide a real-time, WebSocket-enabled chat interface for departmental and club communications; to integrate a context-aware AI campus assistant for instantly resolving student queries; to implement a sequential task pipeline (member-to-member handoff) for collaborative academic projects; and to offer a centralized event and media directory for better campus engagement.

Methodology

The development follows an Agile methodology with iterative feature sprints. The front-end is built for cross-platform responsiveness using modern UI principles (HTML5, CSS3, Tailwind styling, and Vanilla JS) with 3D elements powered by Three.js. The back-end employs a robust Node.js and Express server architecture to handle automated routing and logic. The system incorporates real-time WebSockets (Socket.io) for instant messaging, domain-restricted authentication for security, and RESTful APIs connecting to a database for data persistence. Additionally, a Large Language Model API is integrated to power the automated AI campus assistant.

Project Overview

Project proposals are outlines that describe the steps being taken to complete a project. They can be used in any industry as long as they contain all the important details. This includes the research behind

the project, the basic idea and its relationship to the brand and what needs to be implemented to achieve the project. A good way to start your project proposal is by summarising your idea.

List the reasons behind it, the people involved, your involvement and how much the overall project will cost. Add your objectives and pay particular attention to the problems you're trying to solve with your idea. Next, figure out how you're going to accomplish your goals. Write down the steps you're planning to take, the people you'll be working with and the estimated time of completion.

Industry Analysis

Give a brief explanation for the page

Competitor Name

Duplicate the SWOT table as you evaluate other competitors.

Write a header here

Write about the broader industry your business is in. Specify what industry it is – where it is, how big it is, what its general characteristics are and what the usual products and services are available.

Who are the usual players in the industry? Is there a major entity that dominates the market or not? Which companies would be your potential competitors based on the services they are offering?

Budget Plan

Comprehensive breakdown of expected project costs
